Agenda

- How to evaluate programs
 - tools
 - look for's...
 - examples
- Practice

"Big Data"

loops
↳ while
↳ for

if statements
CONDITIONALS
select/switch

Journal

Describe a few structures that we see in programs to allow for iteration or calculation.

Data types
boolean
integers
float-double
string

Objectives

Content: I will use structure and tools to evaluate the process and output of a program.

Social: I will participate in class activities.

Language: I will use vocabulary such as **loop**, **condition**, **selection**, **list**, **index**, **element** and **variable** in analyzing programs.

Other “output” questions?

Objectives

Content: I will use structure and tools to evaluate the process and output of a program.
