- Warm-up

- Create a sample space for the sum of two tetrahedral dice and calculate the probabilities:

	1	2	3	4
1	2	3	4	5
2	3	4	5	6
3	4	5	6	7
4	5	6	7	8

- $P(\text{even sum}) = \frac{8}{16} = \frac{1}{2}$
- $P(\text{prime sum OR 2 on dice}) = \frac{12}{16} = \frac{3}{4}$
- $P(\text{doubles AND sum of 5}) = \frac{0}{16} = 0$
- $P(\text{doubles given sum of 4}) = \frac{1}{3}$

- Review

Objectives

Content: I will review content from the unit through practice and creating a “notes” sheet.

Social: I will use my time wisely so that I am prepared for the unit test.

Language: I will read questions carefully and use clear vocabulary in my solutions.

Review

PLUS – make
your one page
notes sheet
for the test
